

# Sound From a Higher Power

## In-Ceiling Series

**LC**

**This model proves that good sound can be affordable.**

Perfect for multi-room sound. Mylar tweeter and polypropylene woofer.

**CP**

**Great speaker with lots of features.**

Great for multi-room sound and small surround sound systems. Soft dome tweeter and polypropylene woofer. Swivel tweeter for directional sound.

**CPI**

**Similar to the CP but even more features.**

Great for multi-room sound and small surround sound systems. Soft dome tweeter and polypropylene woofer. Deep frame for additional bass. Level control adjustment for high frequencies. EZGrill system.

**CF**

**Higher-end in-ceiling speaker.**

Great for multi-room sound and surround sound systems. Titanium tweeter and woven carbon fiber woofer. Carbon Fiber enhances mid – bass frequencies. Level control adjustment for high and low frequencies. EZGrill system.

**CA**

**High-end in-ceiling speaker.**

Great for multi-room sound and surround sound systems. Aluminum tweeter and aluminum woofer. Aluminum woofer for low, deep bass. Level control adjustment for high and low frequencies. EZGrill system.

**When it comes to a nice interior,** how it looks is just as important as how it functions. We kept this in mind while designing our series of in-ceiling speakers. Your speakers can be easily hidden up in your ceilings with no fear of sacrificing sound quality.

*These speakers feature technologies usually found in floor standing models but can disappear in to the rooms décor.*

With a wide range of models offered, it's easy to find the perfect speaker to fit any application. Tons of features make these speakers some of the most versatile on the market. Top of the line cone material, whether it's a carbon fiber, silk or aluminum, is used in every tweeter and woofer. Voice imaging control, EZGrill™, level controls, ported baskets and toggle mounting are just a few more features you can find in this series.

TruAudio's in-ceiling speakers prove again our commitment to high quality sound reproduction. It is possible to get great sound from a speaker you don't even know is there.

**EZGrill™**

*The EZGrill™ is just another way we make your job easier. Instead of the typical grill that pushes into the groove, the TruAudio EZGrill uses magnetic pull to attach the grill to the speaker. Specially designed magnets are placed in several locations around the inside frame of the speaker.*

*To install the grill, place it up close to the speaker frame, the magnetic pull will draw it into place. Once the speaker is installed, it takes about 3 seconds to install the grill. You know how long it takes to put in the typical grill.*
