OutCast nominated for another award

With summer less than a week away, our minds are turning towards BBQ's, picnics, camping and outdoor entertaining. Sound-Cast's System's OutCast has the answer for the BEST sound quality you have ever heard from a wireless (I'd dare to say even wired) iPod system.

Not only is it a versatile with an amazing sound it's pretty tuff also. *Check out the YouTube under soundcast to see just how tuff and versatile it really is*

Our OutCast is drenched in water, but it's still playing!

If you have not heard one yet, why not? Contact your rep to get a demo.

Best Sound

Letter from the General Manager

To All Our Valued Dealers:

It only seems like a few weeks ago I was wishing everyone a Merry Christmas, but it's been another year. 2008 has seen many changes within LeisureTech from the expansion into different countries and avenues within Australia, to new and exciting products.

I know you'll agree the two new product ranges added to the LeisureTech family over the past year have been a huge success! Active Thermal Management has filled a gap in custom installations, where SoundCast System has brought a new and exciting wireless iPod range from stand alone systems to integrated solutions.

In 2008 we've seen the introduction of Forté branding for A-BUS, IR, Speakers, Intercom and Cable. We have also seen the A-BUS/DIRECT speakers introduced into the Forté range. I am now proud to showcase some of the new products planned for the 2009 release. See what's new on next page.

With the current world climate unsteady, we at LeisureTech have done our best to hold back on price increases, but as the Australian dollar quickly declines we also must review our prices from the 8th December 2009. We have held domestic shipping cost at the same rate regardless of the 2 x 5% increases this year and with international shipping charges increasing by almost 30% in the past 12 months, we have done our best to go against the trend.

LeisureTech is here to support you and your valued clients by continuing to do what we do best...provide quality products at the best possible price! You can safely install any product in the LTE range knowing it will work the first time every time. Add the backup service from technical support and goods being dispatched on time, surmises our commitment. We promise to bring you new and exciting products to further continue the expansion to our already award-winning range.

Everyone from LeisureTech Electronics wishes to thank you for your continued support and hope you, your team and your families have a very Merry Christmas and a prosperous New Year!

James Goldfinch
General Manager

What's New

Now In Stock

The most flexible plasma resistant receivers on the market

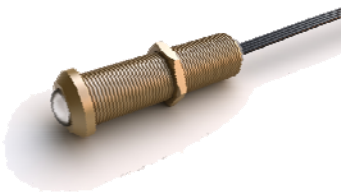

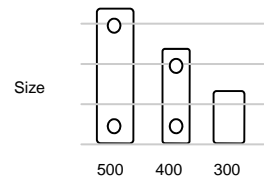

Relaying infrared signals is not as simple as it looks. Sunlight, plasma and other light sources can contain large amounts of infrared which can limit the range or completely block the relay of remote control commands. The outdoor lifestyle in Australia makes the need for higher performance critical. Australian homes tend to incorporate large glassed areas with extended outdoor living. This means that more often than not infrared relay systems are expected to operate in direct or reflected sunlight. As a result LeisureTech Electronics has developed a new range of Forté infrared receivers that give a maximum range of 30 meters in direct sunlight. This technology also provides benefits in operating range and off axis flexibility. New technologies such as emissions from plasma screens continue to test this technology. LeisureTech Electronics continues to develop better infrared receivers to justify its worldwide reputation as the leader in infrared technology, now with a compact range available under the Forté Electronics brand name.

Mini Infrared Receiver

Includes Black, White & Silver covers
Plasma resistant, status and talk back LED

ANGLE: 90 degrees
RANGE: 5-30 meters
SIZE: 45 x 12 x 11 mm (WHD)
FREQUENCY: Dual 38 & 56KHz

Barrel Infrared Receiver

Includes Black, White & Gold covers
Plasma resistant, status and talk back LED

ANGLE: 90 degrees
RANGE: 5-30 meters
SIZE: 49 mm (depth)
CUT OUT: 11.5 mm Dia
FREQUENCY: Dual 38 & 56KHz

Forté Passive connection blocks epitomise the simplicity of our infrared relay systems. Shielded cables are not required. (DL-8 Data Cable is recommended to ensure reliability) cable length is not a problem in most installations and all include status. Our passive units are targeted at basic applications that require less sophistication, but demand flexibility and reliability throughout. With up to 10 receivers able to be used with the PS-2 power supply, you have a complete home IR solution. Now The IRC-135 gives you more flexibility than ever before.

Single Zone Passive Connecting Block

Variable emitter ports to cater for the new fast code range of remotes and equipment.

PORTS: 5 variable emitter ports for when IR flooding is a problem, ideal for Foxtel and some newer DVD players
INPUTS: 4-way plug in connecting block, 3.5mm stereo jack
SIZE: 75 x 17 x 43 mm (WHD)
STATUS: LED indication for power status and IR activity
POWER: PS-2 (included)

Please Note

The IRR-500 Kits and IRR-300 Kits now come with IRC-135. Refer to December Price List

NEW Q1 2009

forté
A-BUS[®]DIRECT[™]

I'm magnetized, so I'm easy to get on and off from my wall docking station

ABR-43

Wall mountable remote

A-BUS/DIRECT gains more advanced control with a sexy new partner.

No more is the problem of losing your remote in your room. The new ABR-43 keypad remote is housed in a wall-mounted cradle preferably where A-BUS/DIRECT speakers are installed.

Its credit card size is handheld and magnetized for easy insert providing the versatility for off or on wall functionally. Simply - it's your choice.

It can learn up to 5 functions from 4 remotes which is ideal for a bedroom to control TV, DVD, air-con and Foxtel.

The ABR-43 gives you the best of both worlds and comes with sleek new colours, an interior designers dream.

Shipping end February 2009, start designing A-BUS/DIRECT with the sexy new ABR-43 keypad remote!

AB-45P Platinum Range

You asked for it, we showed it at this years CEDIA and it's now here. The AB-45 in black and brushed aluminum.

Ideal for any modern kitchen or anywhere you want a bit of class.

The AB-45P and the ABR-43 add to the already extensive range of user-friendly controllers.

MX-6000i

MX-6000 brings the power of WiFi networking to the home theater, without compromising simplicity.

The MX-6000 is the first home theater remote control to offer two independent communications and control methods.

When the MX-6000 is connected to the Internet, pre-programmed modules enable instant access to personalized news, sports, weather and stocks.

Instead of purchasing an expensive "Media PC" or dedicated music server, any PC with iTunes and/or Windows Media Player can be connected to your audio system to act as a high powered music server with the most engaging, intuitive user interface you've ever seen.

MX-6000 Server is a software application that once installed on a PC, combines your iTunes library with your Media Player library. The MX-6000 utilizes its network connection via WiFi to communicate with the server software on the PC. Since all communication happens at WiFi "G" speeds, there are no lags or delays displaying the information or lists on the screen of the MX-6000. All your cover art, artist, album and song title metadata appear on the screen of the MX-6000. Lists are navigated via the integrated scroll wheel without ever connecting a keyboard or mouse to the PC.

PSX-1

iPod docks just put files on a TV. Only URC's PSX-1 adds the exciting features that turn your iPod into a true Personal Server. Everything you've downloaded, from podcasts to music videos, movies and TV shows is selectable on the screen of the MX-6000.

The secret to the unique PSX-1 is the storage drive. The PSX-1 doesn't have one. Instead you insert an iPod (even a visiting friend's) into the docking connector. The PSX-1 includes PSXLink software for both Macs and PCs. Any new content you add to your iTunes library can be synchronized to the iPod in the PSX-1 without ever removing it.

MX-450i

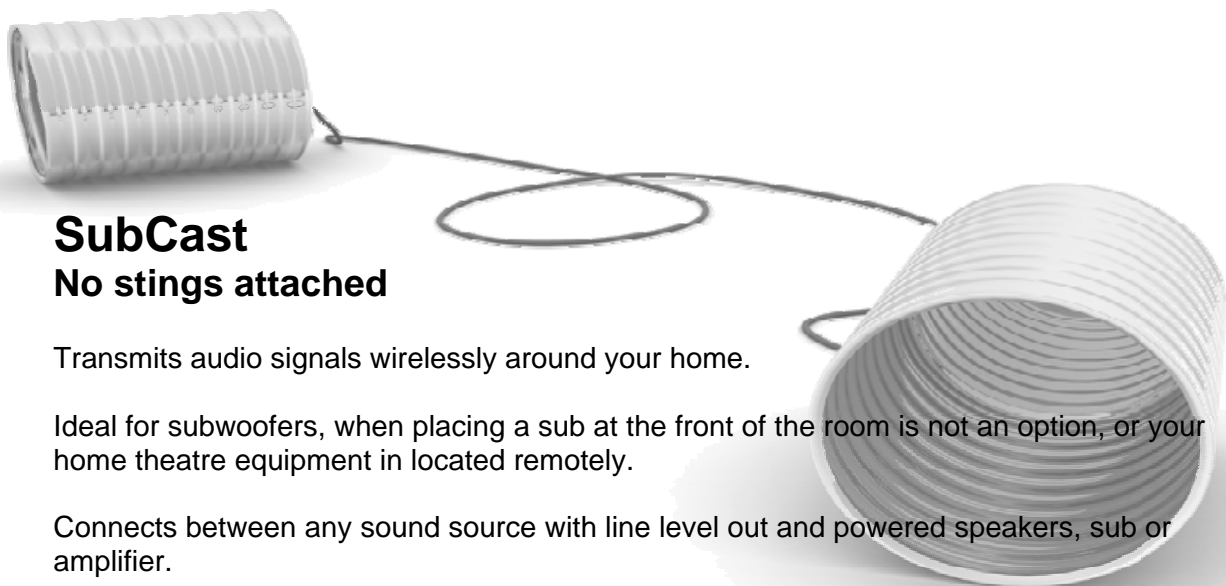

The new URC MX-450 delivers an easy to sell cutting edge form factor, extraordinary functionality and a beautiful colour display. The graphical user interface is bright and easily backlit at the touch of the Light button. Engaging graphical icons for devices, activities and the most popular channels are all pre-programmed.

The MX-450's most revolutionary feature is Macro Editing. This has never been seen before in a standalone programmed remote. At last, the programmer can see the actual macro steps clearly displayed on the remote control's screen. Fine tuning, reordering, adjusting delays and adding steps to the macros can now be done without deleting previous work!

What's New

 SOUNDCAST

Now In Stock

SubCast **No stings attached**

Transmits audio signals wirelessly around your home.

Ideal for subwoofers, when placing a sub at the front of the room is not an option, or your home theatre equipment is located remotely.

Connects between any sound source with line level out and powered speakers, sub or amplifier.

Includes Transmitter, Receiver and power supplies
